

Maths activity – 19.6.20

Halving

Should

If you can print the sheet, ask your child to cut out the pictures and halve the amounts by sharing them out one at a time into two groups. If you can't print the sheet, count how many pictures there are and then collect that many objects to share out.

Using the same pictures, your child could try making different groups and sharing them. Can you always share them fairly?

Could

If your child would like a challenge, they can try colouring these bar models to halve odd numbers up to 10. The first has been done for them.

Half of 3 is 1 and a half

Half of 5 is _____

Half of 7 is _____

Half of 9 is _____
