

## Thursday

16.07.2020

Good morning Longboats, how are you today?

If you are still here doing Maths, well done!

Here are a selection of problems to solve. You can choose to do all of them or pick a couple and do them really well, showing your working out clearly and making sure that you break it down into a series of smaller steps.

- 1 There are 25 children in a class. The bar chart shows the number of children in the class who walk to school each day.

- (a) What percentage of the class walked to school on Thursday?  
(b) One of the days it rained. Which day do you think it was? Explain to your friend.

Or, write an explanation using key vocabulary...

- 2 Order the following numbers. Start with the smallest.

- 1 Here are some digit cards.

Find the 4-digit number that is closest to 5,000

You may use each card only once.

- 2 Complete the number sentences.

$$65 + \square = 79$$

$$83 + 28 = 82 + \square$$

- 3 Three identical rectangles are arranged to make a shape.

What is the perimeter of the shape?
