

Maths activity – 7.7.20

Sharing

Today we will be working on sharing our amounts of objects into groups. Firstly, you will need to help your child to gather together 20 small objects which they will be able to share out. For each question, remind them that they will need to count out the total number needed for the question first.

Your child will need to share out one at a time for these questions. They might find it helpful to have different pots, cups or spaces (you could use some books) for the number of groups they are sharing into.

For example:

Share 6 objects into 3 equal groups.

2

Explain to your child that the answer is 2 because there are 2 in each group.

Should

Your child should complete these sharing questions using objects.

Share **9** objects into **3** equal groups.

Share **8** objects into **4** equal groups.

Share **6** objects into **2** equal groups.

Share **10** objects into **5** equal groups.

Share **12** objects into **3** equal groups.

Share **8** objects into **2** equal groups.

Could

If your child would like a challenge, ask them to draw around these circles to share them into equal groups. The first one has been done for them.
